

Materiality Analysis

By evaluating sustainability-related risks associated with our product categories and simultaneously understanding which of these risks are of greatest importance to our stakeholders, Arvid Nordquist can develop and implement a sustainability strategy.

The overall mapping provides the following prioritization regarding sustainability aspects:

- **Greenhouse gas emissions**
- **Human rights/employment practices and occupational health & safety in the value chain**
- **Land use and biodiversity loss**
- **Supply chain governance**
- **Resource-efficient and circular packaging solutions**
- **Water resource depletion**
- **Chemical use and soil degradation in agriculture**
- **Terrestrial and marine eutrophication**
- **Readily biodegradable chemicals (Non-Food)**
